Libra Plastic stool

A balanced and well-proportioned collection. These are the features that prevailed when giving the name to the new LIBRA seating family, designed by SandonàBettini .
Built around the harmony of a highly compact frame, suitable to enhance its multi-purpose talent within contract and residential settings, LIBRA is an extremely comfortable, geometrically minimalist seat-shell that can be assembled without any screws, as per Diemmebi best tradition.
A seat in balance between aesthetics and functionality, between ergonomics and a tone-on-tone palette, that takes inspiration from sustainable and circular values, thanks to the possibility of using of certified ReMade in Italy plastic parts.
LIBRA, the harmony of sitting.
