

Passepartout

Design Alberto Basaglia Natalia Rota Nodari

Design patent. Constructed of epoxy-coated extruded aluminium, Passepartout is a family of tables that meet even the most diverse and sophisticated needs.

Its versatility and neat design make it an ideal furnishing solution for joyful get-togethers, meetings and brainstorming sessions.

The aluminium lightweight frame and joints support the top, which is positioned flush with the structure to fully conceal it and ideally create a single element.

Three different aluminium joints make possible endless configurations.

The top (10 mm thick) is available in lacquered glass or HPL. Ideal for public areas, residential and working environments.
