

TEKNO Design Angelo Pinaffo

Tekno is the multi-function table that responds to the needs of a dynamic configuration for working spaces. Tekno has aesthetic and functional advantages housed in an elegant structure with aluminium die-cast feet and Ø75 wheels and soft lines whose design allows for a natural combination with the Kendò seat with wheels. Tekno showcases high aesthetic and safety standards, thanks to a plastic casing that covers all fastening systems and moving parts, as well as braking castors with non marking thermoplastic tread. Its castors, along with the tilting the top and comfortable handles, allow for absolute freedom of movement and storage inside any environment. Tekno's composition with feet and non-tilting top can also be used as a desk for office and home-office applications. There are numerous accessories available, including solid and practical hooks that facilitate compositions and joining of the tables even at 60°, as well as adjustable feet that can be used in the same structure along with the braking castors.
